

看 fd 的文件

```
OpenSSH SSH client
```

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
char buf[32];
int main(int argc, char* argv[], char* envp[]){
    if(argc<2){
        printf("pass argv[1] a number\n");
        return 0;
    }
    int fd = atoi( argv[1] ) - 0x1234;
    int len = 0;
    len = read(fd, buf, 32);
    if(!strcmp("LETMEVIN\n", buf)){
        printf("good job :)\n");
        system("/bin/cat flag");
        exit(0);
    }
    printf("learn about Linux file IO\n");
    return 0;
}
```

```
"fd.c" [readonly] 22L, 418C 1, 1 A11
```

输入0x1234

然后输入 LETMEWIN

即可拿到flag
