

简单的固件分析

```
.08          EXPORT commServer
.08 commServer DCD aEchoByethost51 ; DATA XREF: initConnection+8C↑o
.08          ; .text:off_10C2C↑o
.08          ; "echo.byethost51.com"
.08          EXPORT ...
```

```
L6      currentServer = 0;
L7      strcpy(s, (&commServer)[currentServer]);
L8      v3 = 36667;
L9      if ( strchr(s, 58) )
```

得到网址和端口

```
