.net程序

dnspy查看

这里要说一下.net的格式

因为是.Net是每个函数绑定了控件的

这里validate控件是button类型

点进去看

```
2    // Token: 0x06000002 RID: 2 RVA: 0x00002068 File Offset: 0x00000268
3    private void button1_Click(object sender, EventArgs e)
4    {
5        string text = this.textPassword.Text;
6        ValidatePasswd validatePasswd = new ValidatePasswd(text);
7        bool flag = validatePasswd.verifyPasswd();
8        bool flag2 = flag;
9        if (flag2)
10       {
11           MessageBox.Show("You now vaildate this challenge");
12       }
13       else
14       {
15           MessageBox.Show("Wrong password, try harder");
16       }
17   }
18
```

可以看出其绑定了verifyPasswd

```
     // Token: 0x0600000B RID: 11 RVA: 0x0000263C File Offset: 0x0000083C
     public bool verifyPasswd()
     {
         bool result = false;
         bool flag = Convert.ToBase64String(Encoding.UTF8.GetBytes(this.passwd)) == "Q 0ZJey5OZXRDI18xc19AdzNzMG0zfQ==";
         if (flag)
         {
             result = true;
         }
         return result;
     }
```

看出是base64解码
